To Our Friends Gardeners of America

My father, W. Atlee Burpee, started selling seeds by mail in 1876, when the nation was just 100 years old. For 63 years the business has grown, so that today we are the largest direct-by-mail seed house in the world. This remarkable record is due to the success that millions of vegetable and flower gardeners have had with Burpee's Seeds.

JAN 10 1939
U. S. Department of Agriculture.

We are interested in your success;—your garden is our first thought. To supply you with the best seeds and bulbs that grow has been and always will be the purpose of this business.

Most of our flower seeds are grown in California on our Floradale Seed Farms. There in the Lompoc Valley are produced the strongest-growing seeds for any climate in America. Other flowers and vegetables are grown in nearly all parts of the world, each where it will develop the strongest seeds; thus you are assured that *"Burpee's Seeds Grow."*

All Burpee seeds are tested on our Fordhook Farms near Philadelphia, and each year we prove that there are no better seeds than Burpee's. On the next two pages are just a few pictures of our famous Fordhook and Floradale Farms; others will be found throughout the book.

We hope that we may have the pleasure of supplying you with the Best Seeds that Grow for 1939. Burpee's Seed Catalog makes it easy for you to order direct from our Headquarters in Philadelphia.

Faithfully yours,

David Burpee

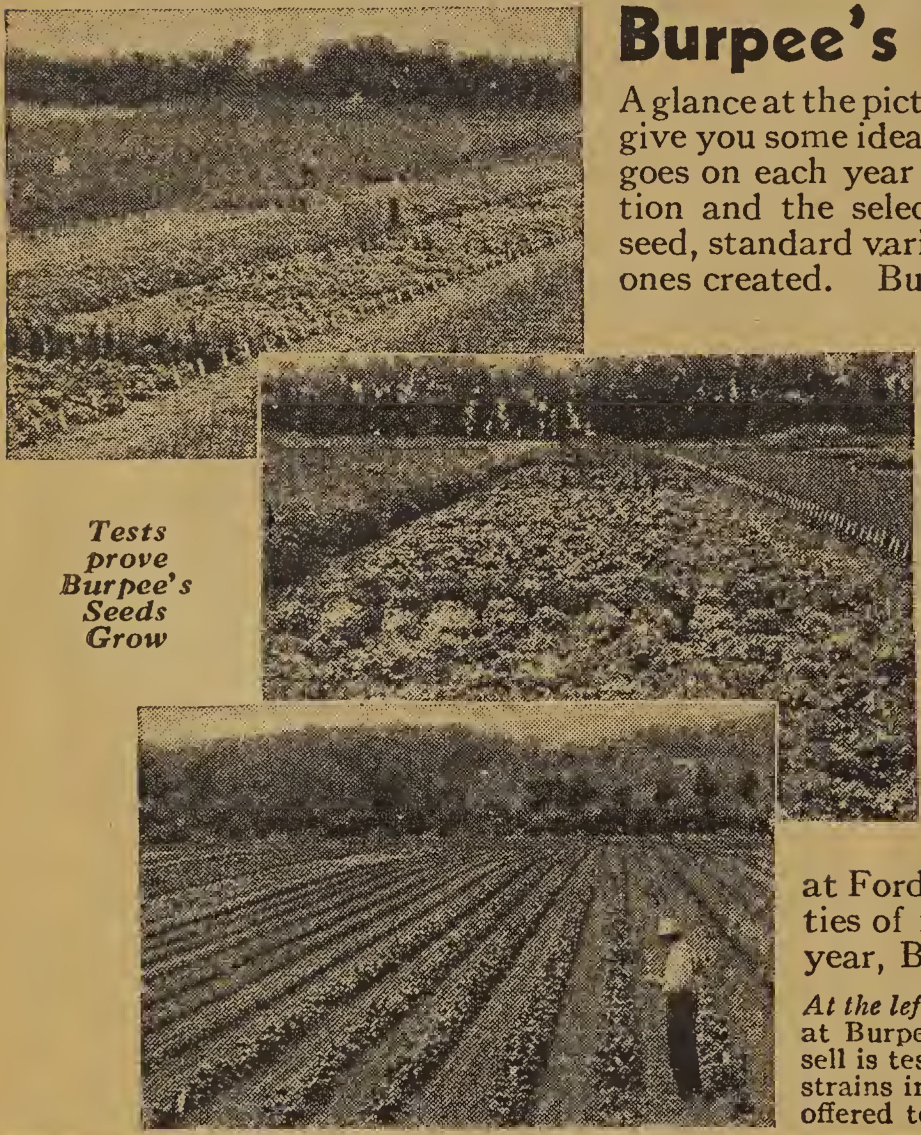
Experimental work, as well as seed growing, goes on continually at Burpee's Floradale Seed Farms in California and Burpee's Fordhook Farms near Philadelphia.

Burpee's Experimental Grounds

A glance at the picture across the top of this and the next page will give you some idea of the vast amount of experimental work that goes on each year at our Floradale Seed Farms. By hybridization and the selection of the best individual plants for stock seed, standard varieties are being continually improved and new ones created. Burpee has contributed much to horticulture.

Our staff of expert plant breeders, with keen eyes and a knowledge of just what makes one plant better than another, go through our test blocks day after day selecting those plants which show special merit. To prevent pollinization by bees carrying pollen from some less desirable plant, the selected plants are "caged," or, in other words, completely surrounded and covered with a muslin netting. Some of the "caged" plants are those which showed signs of a "break" or "mutation" and from which an entirely new or better variety may be developed.

The actual results of these long series of experiments, conducted both at Floradale and at Fordhook, are seen in the new and improved varieties of flowers and vegetables with which, year after year, Burpee has enriched the gardens of the world.



Tests prove Burpee's Seeds Grow

At the left are pictured sections of the Trial or Proving Grounds at Burpee's Fordhook Farms. Every variety of seed that we sell is tested for purity and vitality and compared with similar strains in cultivation so that the Best varieties always are offered to Burpee customers.

Floradale Farms comprise hundreds of acres in the fertile Lompoc Valley, which is surrounded by mountains opening out to the Pacific Ocean, 50 miles north of Santa Barbara.

The best individual plants are carefully selected to furnish seed for the next year's sowing. Such plants are "caged" to prevent being mixed by bees.

and Famous Seed Farms

Burpee's Fordhook and Burpee's Floradale Farms are the most famous Seed Farms in the world. In addition to these great farms and experimental grounds, we grow large acreages of the finest vegetable seeds in Michigan, Wyoming and Idaho, where the climatic conditions are most favorable for growing many varieties. Your success with Burpee's Seeds is traceable directly to the work carried on at our farms. Through careful testing we are able to supply you with seeds of known quality, seeds that can honestly be guaranteed to grow, seeds that will give you the greatest returns from your investment and labor. We know Burpee's Seeds will grow to perfection wherever they are sown; they are world famous.

Because we specialize in seeds and operate our own seed-growing farms, we can quote the Lowest Prices for seeds of the Highest Quality. Send to Burpee for seeds that are guaranteed, reliable, dependable and which are sold to hundreds of thousands of gardeners annually. 63 years of experience growing seeds are back of Burpee's Seeds; they are worth more but cost no more than others, so why gamble with your gardening success? Sow Burpee's Seeds—the Best Seeds that Grow.

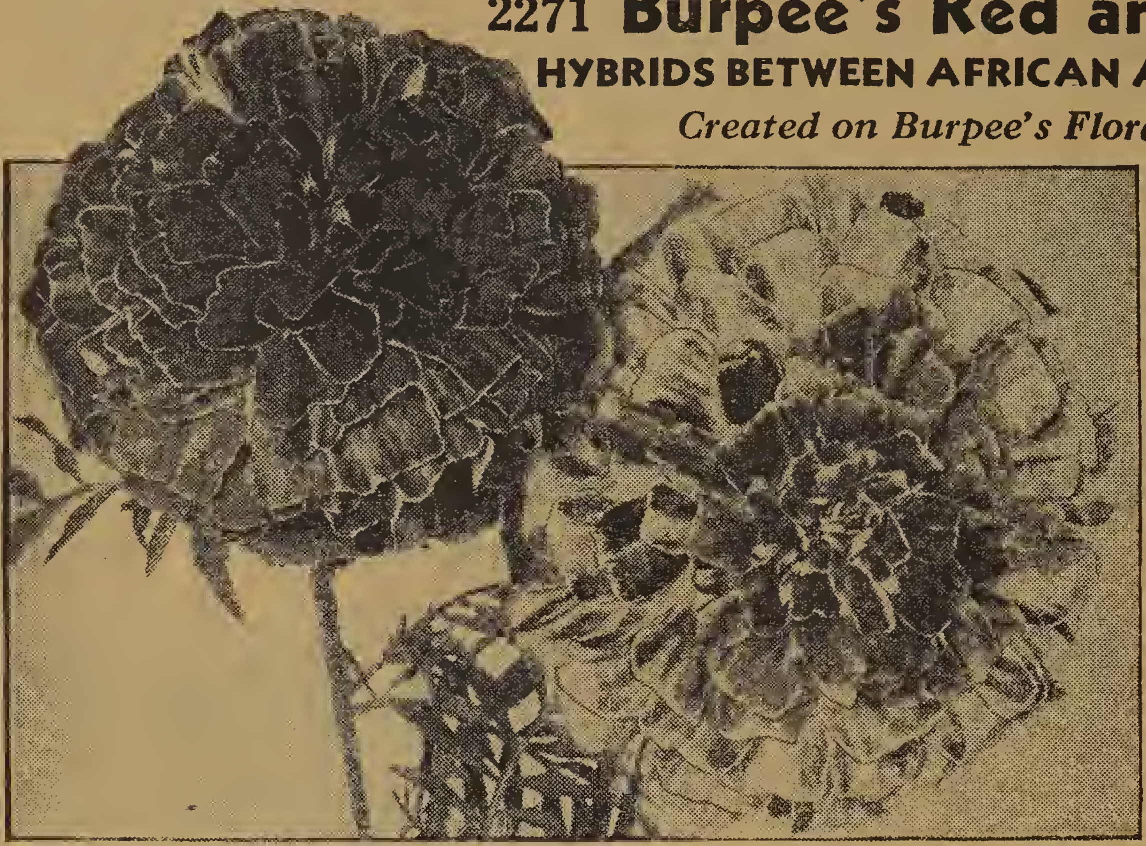
NEW MARIGOLDS

2271 Burpee's Red and Gold Hybrids

HYBRIDS BETWEEN AFRICAN AND FRENCH MARIGOLDS

Created on Burpee's Floradale Seed Farms



These are the only large flowered Red Marigolds in existence. Some flowers are solid red with a brilliance never before seen in Marigolds; others are delightful combinations of red and gold. The flowers vary in color according to season and even in different flowers on the same plant at the same time. At times they are almost pure golden-yellow and at other times bright rich mahogany-scarlet. In vividness and richness, the coloring of these flowers is unsurpassed. **Burpee's Red and Gold Hybrids** are the liveliest colored and most outstanding of all Marigolds.

The flowers of Burpee's Red and Gold Hybrids grow 2½ to 3 in. across. They are extremely double and nearly three times the size of the largest double French Marigold. The petals are of such great substance that the flowers will remain in good condition on the plants for two to three weeks and equally as long in water when cut. Keeping qualities are remarkable.

Red and Gold Hybrid Marigolds are amazing in many ways. They are the earliest of all Marigolds as they come into bloom in less than eight weeks from seed. The plants are more profuse blooming and will continue to flower over a longer period of time than any other Marigold, in fact, they have flowered continuously for more than five months in the open garden. Plants grow 1½ ft. tall, 2 ft. wide, and are literally covered with flowers at all times.

Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a number of African Marigolds of an orange color will appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems, whereas the hybrids have deep red stems. In this way, if you desire, you may separate the hybrids from the African Marigolds before setting them out into a permanent location.

Burpee's Red and Gold Hybrid Marigolds are the most sensational new flowers for 1939. Nothing like them has ever been sold before. Exclusively Burpee's from Floradale Seed Farms.

Packet (60 seeds) 25¢; 135 seeds 50¢; 300 seeds $1.00; 1000 seeds $3.00.

2272 Golden Glow

New Marigold with Odorless Foliage

The bright golden yellow flowers do not look like any other Marigold but they do resemble in color and form the good old favorite "Golden Glow" Rudbeckia. The way the plants bear their flowers in clusters of from 5 to 10 on the ends of heavy branches is astonishing. Individual flowers grow 2 to 2½ in. across, the first ones appearing in 17 weeks after seed is sown. Plants grow 2 ft. tall. Golden Glow is a distinctly new Marigold with **odorless foliage,** wonderful for cutting or garden display. Received Honorable Mention in the All-America trials. **Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds $1.00.**

BEST NEW FLOWERS

Blue Sentinel, Burpee's New Dwarf Erect Verbena

Burpee's New Dwarf Erect Verbena

2761 Blue Sentinel

Winner of the Bronze Medal for 1939 in the All-America Trials

Blue Sentinel possesses the finest plant habit ever seen in Verbenas. The plants are dwarf, compact, and erect growing, so that they never break apart and appear bare in the center as is the case with the spreading types. They grow 10 in. high, 20 in. wide, and are much branched, each upright stem carrying an attractive head of rich blue flowers. Each plant bears from forty to fifty such clusters when they are in full bloom.

The flower heads are round, deep, and well formed, about 2 in. across, and composed of about 25 florets. These individual florets measure ¾ in. across. As the florets wither and drop from the bottom of the head, new ones open at the top, so that each cluster will continue to bloom for several weeks and produce well over 100 florets. The color of the flowers is a rich royal violet-blue made especially beautiful by a deep velvety lustre. Perhaps a surprise to the growers of Blue Sentinel will be its delightful fragrance, which is like both Honeysuckle and Jasmine. It is a pleasing scent which invites one to look for its source.

The plants will bloom for a period of over three months, and retain their compact habit over that entire length of time. For this reason Blue Sentinel is especially suited to use in edgings, borders and beds. Should be grown in a sunny location. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.**

1895 Cynoglossum, Firmament

Winner of the Bronze Medal for 1939 in the All-America Trials

For a "blue" garden flower, Cynoglossum, popularly known as Chinese Forget-me-not, has always been a favorite. This new variety, being of dwarf, bushy, compact growth, about 15 in. high, is a most welcome addition and should prove the most valuable and desirable of all. Flowers are bright indigo-blue and resemble those of Forget-me-nots but larger. Plants are most floriferous, being continually in bloom throughout the summer until killed by frost. Of the easiest culture; anyone can grow it in any good garden soil. A "blue" gem for beds, borders, edgings and rock gardens. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.**

2012 Annual Hollyhock
Indian Spring

Winner of the Silver Medal for 1939 in the All-America Trials

Semi-double fringed flowers in shades of pink, from bright rose to rosy carmine, are freely produced on 4 to 5 ft. plants the first season. Named "Annual" because the plants will bloom in August if the seed is started indoors in February or March. While plants will bloom the same year the seeds are sown, they will live over the winter and last for several years. After the main or central stem has produced its flowers, the side branches begin to bloom so that a continuous display is to be had. A novelty of exceptional merit. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.**

2608 Phlox Drummondii gigantea
Salmon Glory

Winner of the Silver Medal for 1939 in the All-America Trials

Individual florets are huge, 1¼ to 1½ in. across, and borne in massive trusses on strong, stocky plants 10 in. high. The color is a pure salmon-pink set off by a wide, distinct, creamy white eye—one of the most beautiful soft color combinations; clear, clean and crisp. One of the easiest grown and most satisfactory of the summer-flowering annuals for beds, borders, edgings and cutting. Grows and thrives in any kind of soil in a sunny position, but produces best flowers in a light, rich loam. Especially effective in masses. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.**

2267 Giant Imperial Larkspur
Lady Lenore

Fully double flowers of soft salmon-pink. Spikes grow 3½ to 4½ ft. tall, very stately, with as many as 25 to 30 flowers open at one time; valuable for cutting or garden use. So double and beautiful are the flowers that spikes of them may be likened to garlands of Sweetheart roses of the daintiest pink color—a shade which not only seems to be at ease with so many other colors but really brightens and gives more life to combinations in which it is present. Equally as charming under artificial light as in daylight. **Pkt. 25¢; ⅛ oz. 60¢; ¼ oz. $1.00.**

THE BEST NEW FLOWERS

Burpee's New Gloxinia-flowered Petunia, Strawberry Festival

2448 **Burpee's New Gloxinia-flowered Petunia Strawberry Festival**

Illustrated in color on front cover

An entirely new type of Petunia in which are combined some of the most desirable features of the Giant Ruffled and Balcony classes. While the flowers possess a form resembling that of the Giant Ruffled Petunias, having a wide throat and artistically waved margins, they compare in size with the Balcony Petunias, being 2½ to 3 in. across. Like the Balcony Petunias, these flowers are borne in great profusion on large, spreading plants, which average 1½ ft. in height and 3 ft. across. The shape of the flowers, with their broad throats and wavy edges, resembles a Gloxinia. The color is about half-way between crushed strawberry and old rose. Radiating out of the rich plum colored throat are many deep crimson, much-branched veins. Long stems, artistic flowers and attractive foliage all combine to make Strawberry Festival the finest of all Petunias for cutting. As easy to grow as any Bedding Petunia. **Pkt. 10¢; 3 pkts. 25¢; 1/128 oz. 50¢; 1/32 oz. $1.75.**

2297 **Marigold, Early Sunshine**

Winner of the Bronze Medal for 1939 in the All-America Trials. Burpee origination. The cheerful, bright lemon-yellow flowers with their curled and interlaced florets resemble Pompon Chrysanthemums; they grow 2½ in. across and 1½ in. deep. Plants grow 2 ft. tall, coming into bloom 15 weeks from seed; they continue to bloom profusely until frost. **Pkt. 25¢; ⅛ oz. $1.00; ¼ oz. $1.75.**

2272 **Marigold, Golden Glow**

New Chrysanthemum-flowered Marigold with odorless foliage. Received Honorable Mention in the All-America trials for 1939. Burpee origination. In both color and form, the flowers resemble the well-known Golden Glow Rudbeckia; bright, sharp golden yellow, fully double and 2½ in. across. Borne in clusters of 5 to 10 on the ends of strong branches. Plants grow 26 in. high and begin blooming in 17 weeks.
Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds $1.00.

2336 **Nasturtium, Garnet Gem**

A striking new color in Dwarf Double Nasturtiums—flashing garnet-red with just enough orange suffusion to enliven it with an iridescent glow. It is a gorgeous color, on fire in the sun and deep in the shade. The compactness of the plants is very uniform, making them excellent for bedding, borders, edgings, etc. The flowers are sweet scented. **Pkt. 25¢; 2 pkts. 45¢; oz. $1.50.**

2313 **Nasturtium Tigered Flowered**

Mixed Colors. Flowers are very large, semi-double and of strikingly different patterns; markings of flowers on the same plant will vary with the season. Markings are most irregular and bizarre; sometimes they are confined to the throat while on other flowers the whole surface is blotched or mottled with deep colors on a light ground. Plants are semi-tall. **Pkt. 20¢; 3 pkts. 50¢; oz. $1.25.**

1883 **Guinea Gold Snapdragon**

Winner of the Bronze Medal for 1939 in the All-America Trials. Dwarf, neat, bushy plants about 15 in. tall, bearing many long, dense spikes of glowing bronzy orange flowers with yellow throat. Color blending is most attractive. Begins to bloom early and continues for a wonderfully long time. Ideal for beds, borders and cutting. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.**

Burpee's New Sweet Peas are offered and described on page 49.

FOR YOUR 1939 GARDEN

2963 Scarlett O'Hara Morning Glory

Winner of the Gold Medal for 1939 in the All-America Trials

The face of the flower is bright, velvety rosy red, and the five broad veins radiating from its throat in the form of a five-pointed star are still more brilliantly colored with a tone of pure red almost approaching scarlet.

The flowers grow 3½ to 4 in. across, and remain open longer than other Morning Glories; very often they are found open in the afternoon. They are produced most profusely from early in the summer until frost. Plants make excellent coverage for embankments and waste places; showy when trained on stakes or poles. More than 50 flowers have been counted on one plant in one day.
Pkt. 25¢; 2 pkts. 40¢; 3 pkts. 50¢; 7 pkts. $1.00; ½ oz. $2.50.

Scarlett O'Hara Morning Glory

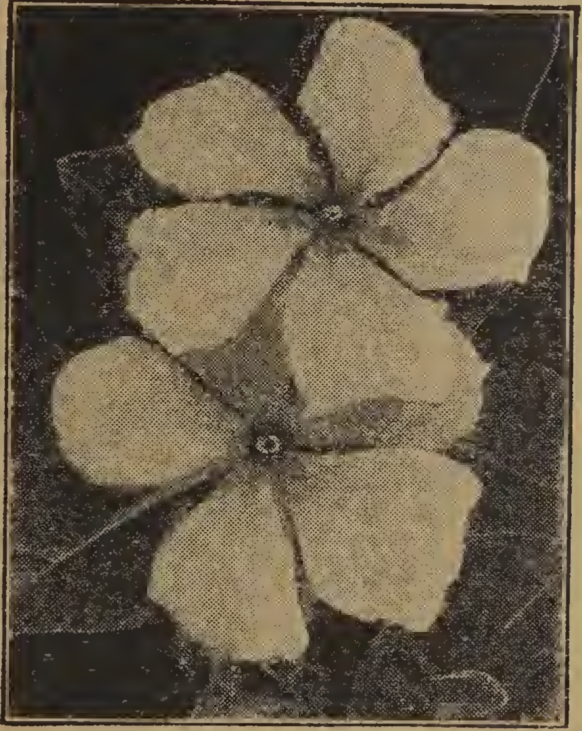
Merriwinkle

2726 Twinkles

Improved Periwinkle (*Vinca rosea*) as grown by Burpee

The outer part of the flowers is soft blush pink; at the center there is a bright red eye and this is surrounded by a wide zone of glowing rose—a most pleasing combination of colors. Individual flowers grow 2 in. across and each plant bears hundreds of flowers from early summer until frost. The deep green glossy leaves themselves possess rare beauty, appearing as though they were made of wax. As a cut flower, Twinkles is superb and will last for weeks in water.

One of the outstanding merits of this Merriwinkle which should recommend it for extensive use is its resistance to heat and drought. Plants grow 1½ ft. tall and are always in bloom; ideal for growing in pots, beds and borders.
Pkt. 20¢; ⅛ oz. 50¢; ¼ oz. 85¢.



Merriwinkle, Twinkles

2425 Petunia Hollywood Star

Winner of the Silver Medal for 1939 in the All-America Trials

Hybrida bedding Petunia of unique form. Flowers are distinctly five-pointed, star-shaped and of a charming shade of rich rose set off by an amber colored throat. They grow 2 in. across and are deeply cut to form a most attractive star, entirely different from all other Petunias but just as easily grown. Plants begin to bloom quite early in the season; at first they are bushy and compact but later spread out as much as any other bedding variety. They bloom most profusely, producing a wealth of flowers even under the most trying conditions of weather and soil. They are highly recommended for borders, edgings, or beds in a location where they receive full sun.
Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.

Miniature Petunia, Velvet Gem

2393 Miniature Petunia Velvet Gem

Velvet Gem is an attractive dwarf Petunia with small glistening flowers, 2 in. across, of a deep rosy purple. When the buds untwist, the color is almost black; as they expand it becomes brighter but the throat and rib down each petal retain the darker tone. The open flowers have the softness and rich lustre of velvet. The blue pollen-covered stamens add a touch of contrast in the throat and attract attention to it. The plants, which grow about 10 in. high, form neat, ball-shaped mounds completely covered with flowers all summer until frost. Excellent for borders, edgings and rock gardens.
Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00; 1/128 oz. $2.00.

2446 Dwarf Compact Petunia Ladybird

All-America Bronze Medal Winner

The scarlet-rose flowers, overlaid with faint darker colored veinings towards the throat, are of such a deep color and fiery appearance as to be called red by many of those who have seen it in the All-America trials. It is recommended for its outstanding color; a distinct addition to the dwarf compact group of bedding Petunias. Plants are bushy, round and covered with flowers from early summer until frost. Fine for edgings to taller plants, beds, borders and pots.
Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.

It is a handsome double flower, 3 to 3½ in. across, deep purple-violet, with the center incurving petals displaying a handsome silvery sheen. The plant is not very leafy, seeming to give all its strength to the flowers, which are freely borne on stems 12 to 15 in. long. 2017 Creamy Crinkles

Creamy Crinkles, as the name implies, has a rich creaminess in the color and texture of its flowers which are also delightfully crinkled. It is one of the most double and crinkled of all Eschscholtzias. The general color effect is soft apricot-buff, but the sunlight and shadows cast by the crinkles and extra petals add warmth to the buff, making it appear as a rich primrose-yellow. Creamy Crinkles is a charming flower with delicacy in form and color, 1½ to 2 in. across, freely borne on dwarf, well-branched, erect plants 1 ft. high. Ideal for cut flowers; excellent for mass plantings in beds or borders. As the flowers expand, they resemble semi-double climbing roses in the center of which lies a cluster of brighter yellow and brown curly anthers.

Pkt. 25¢; 2 pkts. 45¢; 1/16 oz. 75¢.

2054 Delightful

A soft delicate tone and a hush pervade the golden apricot cups of Eschscholtzia Delightful set in the feathery background of their silvery bluish green leaves. Inside the cup is a glow of apricot-orange, outside a sheen of silver. Not brilliant, but warm and silky, the flowers lend a smoothness to the air around them. They grow fully 3 in. across and are borne most profusely on sturdy, erect plants, 15 in. high and 10 to 12 in. across. So uniform is the growth that a row of "Delightful" looks like a small, neatly trimmed hedge. The erect habit of the plants, with the profuse mass of large flowers produced on top, lends much to their usefulness in both massed beds and borders. One of the most attractive for garden or cut-flower use.

Pkt. 25¢; 2 pkts. 45¢; 1/16 oz. 75¢.

Flowers are round, pompon-like, and are made up of a multitude of attractively curled and interlaced petals, just like the picture of Golden Sunshine. The blooms grow 2½ in. or more across, the first ones appearing in about 20 weeks after seed is sown. Plants grow 3 ft. high. Start seed indoors.

Early Sunshine

Chrysanthemum-Flowered

2297 Early Sunshine Burpee origination. Flowers have the same attractive form as Dixie Sunshine, but are considerably larger, growing 2½ in. across and 1½ in. deep, and, best of all, they are extremely early. Plants grow 2 ft. tall and produce their cheerful, bright lemon-yellow flowers most profusely. Ideal for cutting. Showy. **Pkt. 25¢; ⅛ oz. $1.00; ¼ oz. $1.75.**

Carnation-Flowered

2295 Golden West Created by Burpee after five years of careful breeding and selection. Earlier blooming, larger flowered, dwarfer growing, and more floriferous than Guinea Gold. Plants start to bloom in 15 weeks after seed is sown. Flowers grow 3½ in. and more across, with petals loosely and gracefully placed. Plants grow 2½ ft. tall, and as they branch freely from near the base, the stems are quite long and borne so profusely that the plants are literally covered with deep orange flowers until killed by frost. 2307 Spanish Gold Marigold

NEW Hedge or Border Type

Unlike any Marigold ever offered. One of the best for all purposes. With its introduction, we have a new and distinct habit of growth in Marigolds called "Hedge or Border"—every plant is identical in habit, height, breadth, extremely bushy, with a flat top and straight sides so that a row of these plants gives the appearance of a neatly trimmed hedge, 20 in. high and 30 in. wide. When in full bloom, the entire top and sides of the plants are covered with deep glowing golden orange flowers, which grow 3 in. across and somewhat resemble Carnations but differ in that the petals are delightfully ruffled and slightly fluted. Flower stems are long and ideal for cutting. Blooms in 20 weeks from seed and continues to flower profusely until frost. Start seed indoors for earliest blooms. **Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds $1.00.**

Calendulas—Scotch Marigolds

Calendula, Orange Fantasy

It is marvelous to see how plant breeders have improved the old-fashioned Calendula that was grown generations ago. The beautiful varieties offered on this page, except where noted, are extra large-flowered and double to the very center. Where summers are not too hot, plants will bloom from early summer until frost, and furnish an endless supply of long-lasting cut-flowers. Calendulas are of easiest culture, succeeding in ordinary well-drained soil. Sow any time during the spring and early summer. The large-flowered varieties are also wonderful for greenhouse growing. 15 to 24 in. tall, depending on the variety.

BURPEE'S EXQUISITE PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in soil that is overly rich.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting. The freedom with which the charming blooms are produced throughout the growing season is truly amazing.

Spreading Bedding *(Petunia hybrida)*

Plants are extremely free blooming, producing a wealth of flowers even under the most trying conditions of weather and soil. Ideal for large beds, borders and porch boxes. Seeds may be sown directly outdoors when soil has become warm or started indoors.

Giant Ruffled Petunias

(Petunia hybrida grandiflora superbissima)

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, borders, cutting, and most valuable for porch and window boxes as well as for pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined, and, when well grown, often measure 5 to 7 in. across. They are marvelous in every respect and their beauty, combined with size, is sure to attract attention. They are ready sellers with those who grow pot plants for sale; marketable flowering plants can be had in four months from the time of sowing the seed. Plants bloom until frost.

Seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes filled with equal parts of good garden loam and leaf mold to which has been added a generous quantity of fine, clean sharp sand. Make sowings about eight weeks before your usual outdoor planting time. Plants may be set in the open ground where they are to remain after soil has become warm and all danger of cold weather is past. Easily grown if directions on the seed packages are carefully followed.

Improved Larkspurs

One of the most beautiful and desirable **annuals** for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is beautiful.

The culture of Annual Larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better, but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 1½ ft. apart.

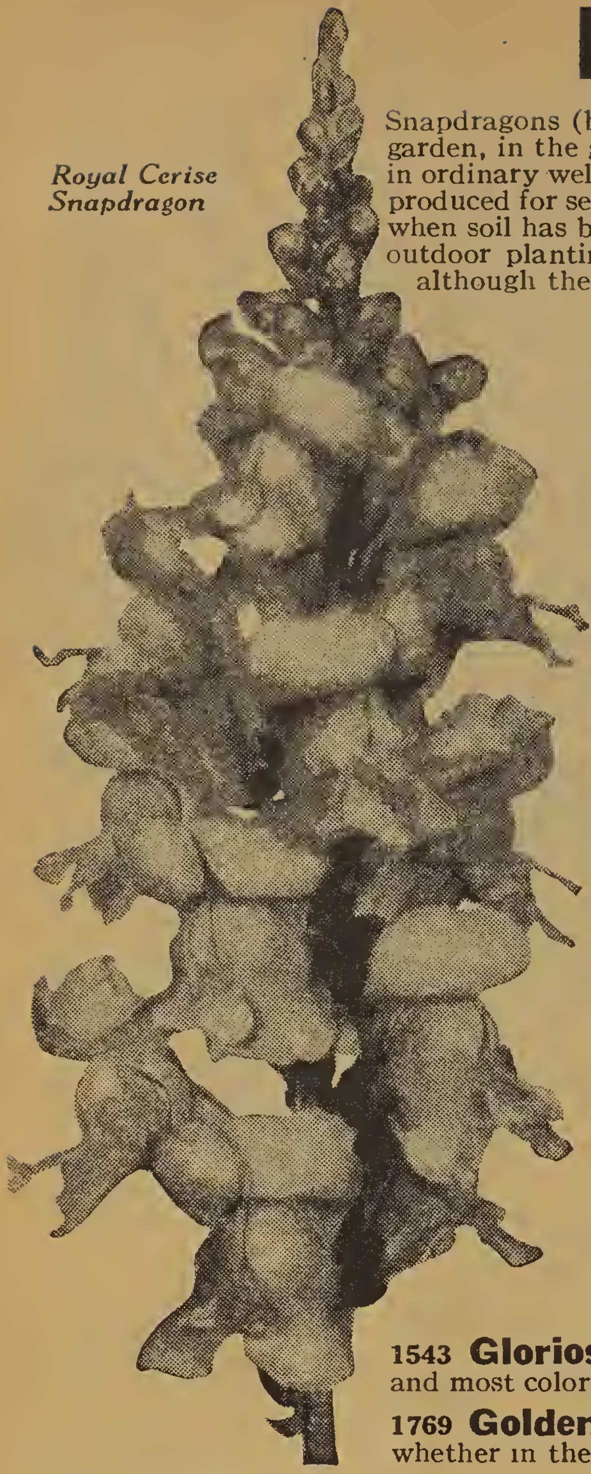
Burpee's Snapdragons



Royal Cerise Snapdragon

Snapdragons (botanically Antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut-flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

Large Flowered Semi-Tall

(Antirrhinum majus nanum grandiflorum)

Also known as "Half-Dwarf," "Intermediate" or "Bedding"

Semi-tall, neat plants, about 15 in. tall, in the garden; free-flowering, bearing long, dense spikes of exquisite blooms almost as large as the Giant types. Excellent for beds, borders and cutting. **Varieties marked (G)** grow somewhat taller outdoors and are especially suited for greenhouse culture during winter, when the spikes will grow 3 to 5 ft. high, depending on the culture.

Dwarf or Globe Shaped Plants

The plants of Burpee's Dwarf Double Nasturtiums are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double, sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, borders, edgings, rock gardens and pot culture.

2336 Garnet Gem

Striking new color—deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. Flowers are double or semi-double, with 8 to 10 petals, and grow about 2½ in. across. Long stemmed and delightfully sweet scented.

Giant Double Nasturtium

A Burpee Specialty

The new 40- to 60-petaled Super-Double Nasturtium found in Burpee's Miracle Mixture

2334 Burpee's Miracle Mixture

Burpee's Double and Super-Double Mixed

These New Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of Burpee's Miracle Mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, others will be Super-Double. Burpee's Super-Double Nasturtiums (*Tropaeolum majus Burpeeii*), when fully open, resemble greenhouse Carnations.

Plants are vigorous and produce an abundance of large, sweet-scented flowers, 3 in. across. The Super-Doubles have as many as **40 to 60 true petals,** and the double hybrids have 8 to 10. Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of the Super-Double type. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other Nasturtiums.

Burpee's Super-Double is the only **Nasturtium** to be given a **Plant Patent.** Plants grown from our Miracle Mixture seed are protected by **U. S. Plant Patent No. 141.**

Packet of 10 seeds for $1.50; 3 packets for $4.00.

Old-Fashioned 5-petaled Single Nasturtium

BURPEE'S GLORIOUS ASTERS

A continuous display of Asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early Asters, we suggest that you have seedlings of later flowering Asters or other flowers coming along to take the place of the Earlies when they are through blooming.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. Asters begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before outdoor planting time.

*** Varieties marked with an asterisk (*) are the new Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."**

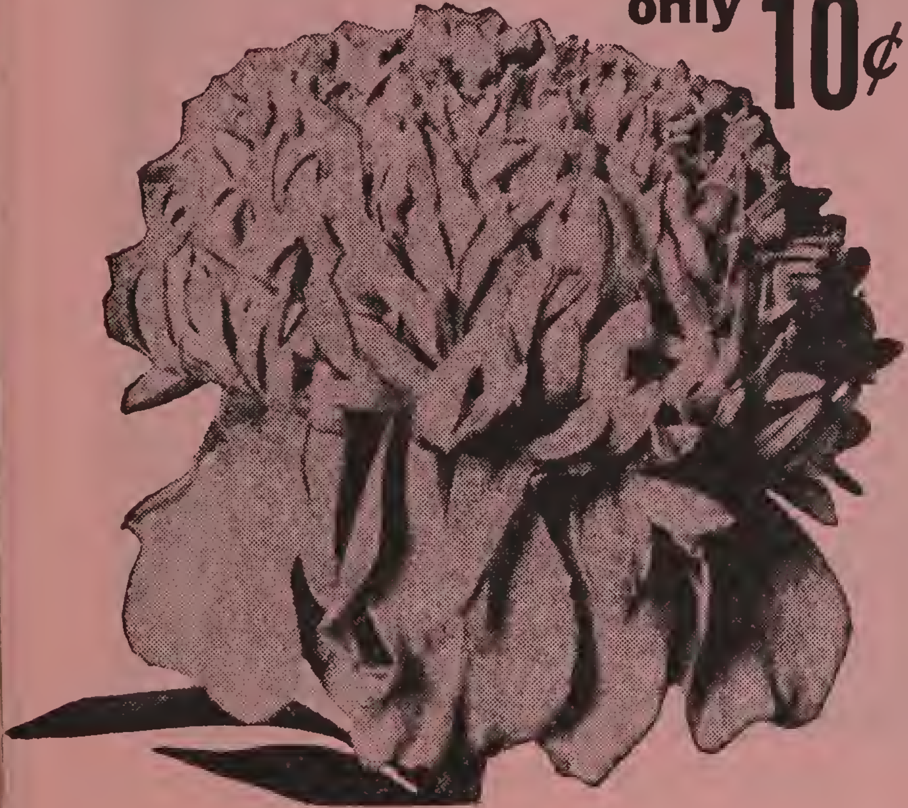
2314 Special Mixture of Burpee's Marigolds

only 10¢



with Odorless Foliage

"Crown of Gold," introduced by us in 1937, was the first Marigold in cultivation with entirely odorless foliage. The elimination of odor from the foliage was one of the greatest improvements in Marigolds since the development of doubles some 300 years ago. This freedom from the usual Marigold odor and distinctly new Collarette or Crown form made "Crown of Gold" the outstanding flower of the year—the winner of the All-America Gold Medal.

This year, in addition to three other colors in the Collarette type, we have Carnation and Chrysanthemum flowered Marigolds, all with *odorless foliage.* We have blended all of them in this special mixture. Early and continuous blooming.

Burpee's Early Flowering Sweet Peas are offered on the next two pages.

Burpee's Early Flowering Sweet Peas

Varieties are arranged in each color class from deep to light shades

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 48 to 53. They are especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North, and also valuable for winter flowering under glass. They are being planted more and more every year.

If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

Burpee's Sweet Peas are famous the world over as the "Best That Grow." The flowers are extra large, of perfect form and texture, well placed on long, strong stems, and usually produced in sprays of four.

Burpee's Famous Zinnias

The value of Zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart, smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of Zinnias are easy to grow.

Mexicana Double, Mixed

Giants of California Zinnias

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the Dahlia-flowered type of Zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, well-branched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders.

Enchantress

3184 **Brightness** Deep rose. A fine variety which combines well with Golden Queen or Daffodil. Very full, perfect form.

3183 **Cerise Queen** Beautiful flowers of a luminous cerise-rose shade; some gardeners know it as vermilion. Widely grown.

3187 **Orange King** Rich cadmium or orange-scarlet flowers of remarkable brilliance, many two-toned.

3186 **Purity** Most outstanding for its pure white color and perfect finish. Splendid alone; lovely with all colors.

3188 **Rose Queen** An exquisite flower of pure, clear, rose color. Most desirable. Radiant, soft, and refined.

Radio Zinnia

Radio Zinnias

3229 **Finest Mixed** When first open, the flowers have somewhat of a star-like appearance, but as they mature they become round, very full, and grow about 3 in. across. Flowers are of many colors; most of them have a two-toned effect, due to the different shade on the reverse of the curved or fluted petals. In our trial gardens and seed farms, "Radio" Zinnias never fail to attract the attention of visitors. Planted in beds or borders, this unique Zinnia will make a colorful display and yield an abundance of long-keeping cut-flowers for home decoration. 3 ft. tall. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢; ½ oz. $1.00.**

Cactus-Flowered Zinnias

Many choice and unusual colors are in this mixture, mostly warmer shades, such as salmon, orange, deep and old rose, russet, and red. 3 ft. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

Navajo Zinnias

Navajo Zinnias

3230 **Mixed Colors** Flowers are of medium size, double and semi-double, and composed of long narrow petals, some of which are slightly incurved or fluted. The bicolor effect of each petal, being heavily tipped white, creamy white or creamy yellow for about one-third its length, is most unusual and attractive. Colors run through lilac, lavender, russet, crimson, orange, yellow, pink and other pastel shades. The many bicolored blooms remind one of the lovely, vivid colorings to be found in a Navajo rug. Bushy plants, about 1½ ft. tall.
Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢; ½ oz. $1.00.

Gaiety Mixture, Dwarf Giant Zinnias

Dwarf Giant Zinnias

Cupid Zinnias—the smallest of all—ideal for cutting

New Cupid Zinnias

Compact plants, about 1 ft. tall, consist of a large number of slender branches which give the plant a well-rounded, bushy habit. Each of the numerous upright stems bears a miniature flower which hardly exceeds 1 in. in diameter. Plants are very floriferous; a mass of color through the summer and fall. They are as easy to grow as any Zinnias.

Cupid Zinnias are especially adapted for borders, bedding and rock gardens, and as a miniature cut flower. The long, slender stems, usually free from lateral branches, are ideal for cutting and may be used alone, as pictured above, or with long-stemmed flowers as well as with the short-stemmed small flowers ordinarily used in miniature vases.

3218 **Elf** Beautiful and fascinating shades of carmine.

Known as the **Pincushion Flower** because the stamens of some varieties are light in color and stick out in contrast to the petals so that they resemble pins stuck in a cushion. The deep black color of one variety has caused it to be called **Mourning Bride.** Does well in widely different kinds of soil. Blooms from midsummer until frost if flowers are not allowed to go to seed. Last well when cut.

The adaptability of perennial flowers for various purposes makes them essential and permanent features of the garden.

Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent **free** upon request.

Average heights and blooming season are given in the descriptions for each class: some variation is natural in different localities.

Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all Lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

BURPEE'S DAHLIA ROOTS

Jersey's Beauty

Each year on our Fordhook Farms we try out hundreds of varieties of Dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all Dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

The Commodore

Award of Merit All-America Trials for 1938

53 days. This is another of the vegetables which have proved themselves on the widely scattered All-America Trial grounds. These pods are 7 in. or more in length, tender, fleshy, and stringless at all stages of growth. The large size of the pods, and the abundance with which they are borne, causes the bean to be one of the most prolific of all bush types. Seeds are a rich wine-red.

ARTICHOKE

1 Green Globe

This tasty vegetable is gaining favor rapidly. It is a perennial which will persist for many years and continue to give a good crop if grown on well-drained, rich soil. Where winters are severe, protect crowns with a heavy mulch to keep them from freezing. It is cultivated for its flowerbuds, whose fleshy bud scales, when cooked, are regarded as a choice delicacy. Sow seed early indoors, setting the plants outdoors after danger of frost is past. One packet will produce about 25 plants; one ounce, 300 plants.
Pkt. 10¢; ½ oz. 25¢; oz. 45¢; 4 ozs. $1.35; ½ lb. $2.45; lb. $4.50.

GREEN-POD BUSH BEANS

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks up to August 10. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft.; 60 lbs. for one acre.

Burpee's Stringless Green-Pod

Noted for their hardiness and extreme earliness. Seeds are a dark coffee-brown color. This variety has long been considered the standard of quality for all Beans, regardless of type. WAX OR YELLOW-POD BUSH BEANS

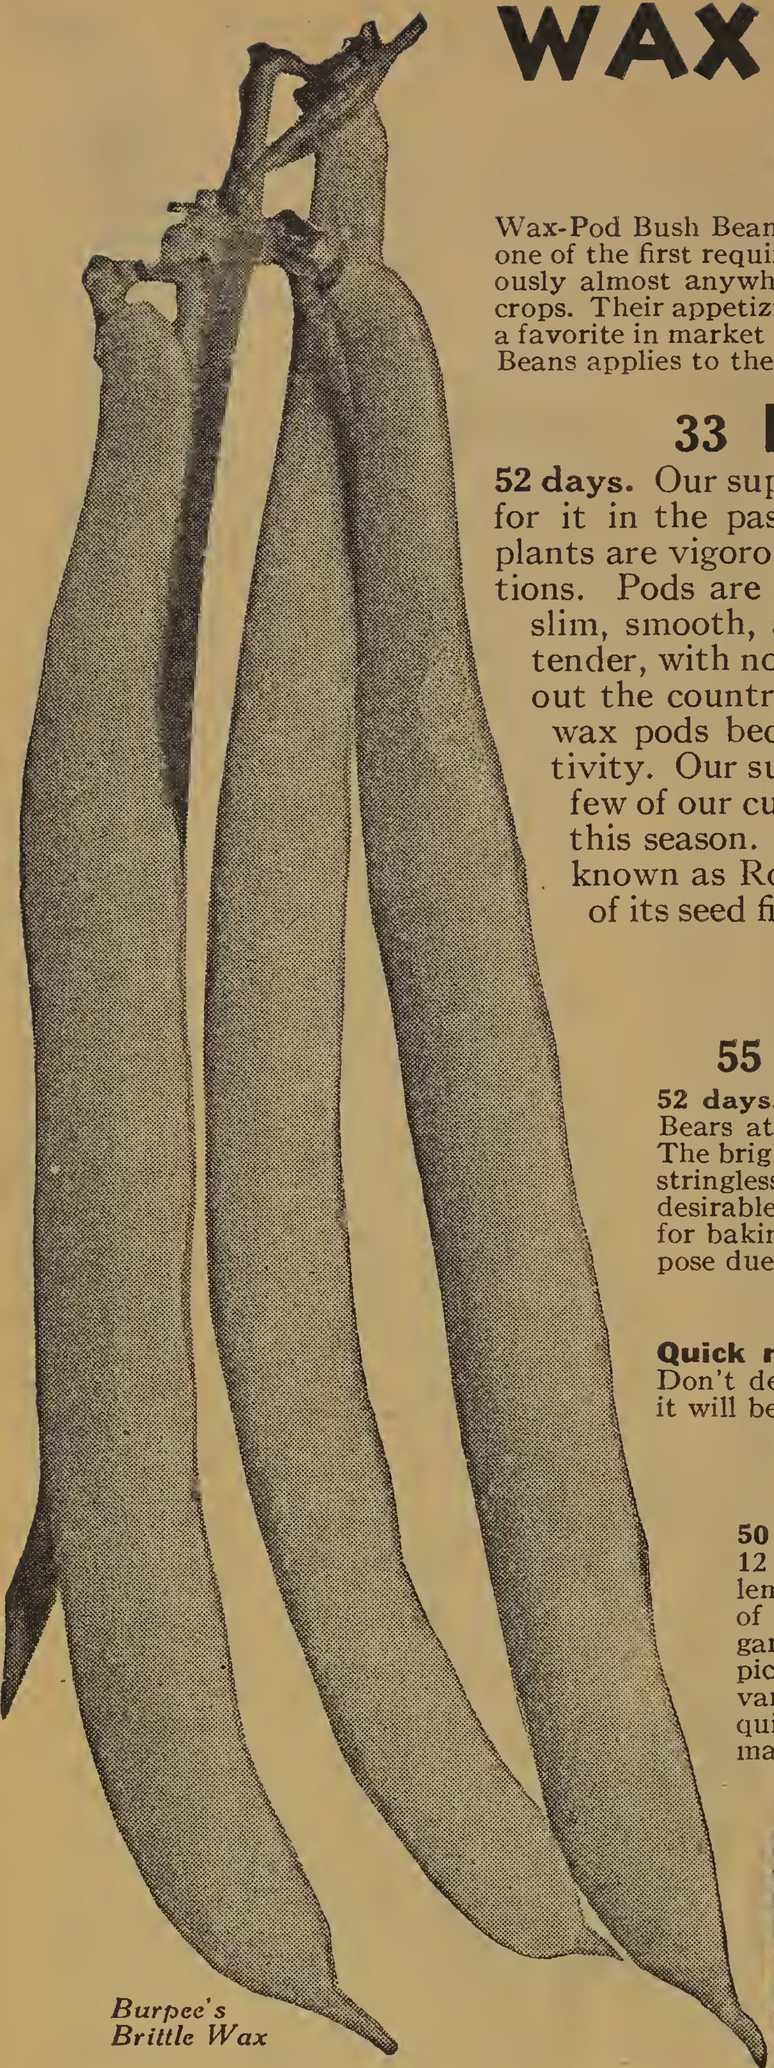
Wax-Pod Bush Beans share with Green-Pod Bush Beans all the qualities that make them one of the first requirements of every gardener and grower. Wax Bush Beans grow vigorously almost anywhere, present no difficulties of cultivation, and produce tremendous crops. Their appetizing, waxy yellow pods and their delicate, distinctive flavor make them a favorite in market or home garden. The planting information given for Green-Pod Bush Beans applies to the Wax Beans as well. The bushes range in size from 12 to 20 in. tall.



Burpee's Brittle Wax

33 Burpee's Brittle Wax ⊙

52 days. Our supply of Brittle Wax has been scarcely equal to the demand for it in the past few years. It's another quality Burpee variety. The plants are vigorous and productive, about 20 in. tall under average conditions. Pods are most attractive, 5½ to 6 in. long, only slightly curved, slim, smooth, and round. They are clear lemon-yellow in color, very tender, with no trace of strings or fiber. Brittle Wax grows well throughout the country. It is our first choice for the home garden among the wax pods because of its appearance, tenderness, flavor, and productivity. Our supply this season will be ample, and we wish to urge those few of our customers who have not grown it before to make a planting this season. The seed is white with a black eye. Brittle Wax is also known as Round Pod Kidney Wax. High quality and the light color of its seed fit Brittle Wax for canning either at home or in the factory.

The bright lemon-yellow pods are straight, brittle, meaty, tender, and entirely stringless at all stages of growth. Seeds, being large and pure white, are desirable as shell Beans. The seeds of any other beans can, of course, be used for baking, but the white-seeded varieties are usually preferred for this purpose due to their appearance. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. $1.55; 10 lbs. or more @ 29¢ per lb.**

41 Rustproof Golden Wax

50 days. Extra early in maturing. Plants are of typical Bush growth, 12 in. tall, and almost entirely resistant to bean rust. The straight, lemon-yellow pods are broad and flat, 5 in. long, stringless, brittle, and of good quality. Profuse bearer. Especially suitable for the home garden or early market. For the size of plant it is very productive; see picture below, which gives some idea of the bearing qualities of this variety. Other features are that it reaches the peak of its season very quickly and is immune to rust and disease, which, in wet seasons, render many varieties of Wax Beans unsightly or unmarketable.

The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive clean color and their absolute freedom from strings; plants are noted for their great prolificness. They are strong growers, forming upright bushes 18 to 20 in. in height. Seeds are white with brownish black eye. Introduced by Burpee in 1906. Kentucky Wonder

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the Bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 74 days. Sow seed when the weather has warmed up, about the second week of May in vicinity of Philadelphia, and not later than June 15. Set poles 4 ft. apart and place 5 to 8 beans around each pole; one packet of seed is enough for 20 poles; 1 lb. of seed for 100 poles. When plants are well established, thin to 3 or 4 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed.

72 Kentucky Wonder or Old Homestead ⊙

65 days. We prefer this to most other green-podded Pole Beans. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long. They are thick and meaty, tender, brittle, and of good quality, showing slight strings as the pods reach full size. Though thick, they appear slender on account of their great length. Pods are borne in clusters and are produced over a long season if picked as they become ready for use. **Pkt. 10¢; ½ lb. 25¢; lb. 35¢; 2 lbs. 55¢; 5 lbs. $1.20; 10 lbs. or more @ 21¢ per lb.**

SHELL BEANS *(with the exception of Giant Butter, they may be used either green or dried)*

Grown as dried Beans for winter use. The culture is similar to that recommended for Green-Pod Bush Beans, but shell Beans should be left on the vine until the pods are matured. The vines are then cut, allowed to dry, and the Beans threshed and stored. One pkt. will sow about 25 ft. of row; one lb. 100 ft. of row; 60 lbs. for one acre. Robust Pea Bean requires but one lb. for 200 ft. of row; 45 lbs. for one acre.

24 Giant Butter or Fava Bean

75 days. They are much hardier than other beans and should be planted as early in the spring as the ground can be worked. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long and quite broad, and contain 4 to 6 large, broad, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble Lima Beans and should be used in the same way. Becoming very popular. The dry seed is quite large, circular, flat, reddish brown with black eye. Make one planting as early as possible; they will not thrive in summer heat. One pkt. will plant 15 ft. of row; 1 lb. 75 ft.; 120 lbs. for one acre. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 70¢; 5 lbs. $1.25; 10 lbs. or more @ 22¢ per lb.**

POLE LIMA BEANS

Pole Lima Beans greatly outyield the bush varieties per square foot of garden space. They mature somewhat later. Set the poles 4 ft. apart each way and place 6 to 8 seeds around each pole with the eyes down, covering with 2 in. of fine soil. Later thin to 2 or 3 plants to a pole. Do not plant until the ground is thoroughly warm, about the middle of May in the vicinity of Philadelphia. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row. All Lima Beans prefer a warm, sandy loam soil enriched with well-rotted stable manure; wait until soil is dry and weather settled before planting.

105 Burpee's Best ⊙

92 days. The Fordhook among the Pole Limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a Pole Bean with all the good characteristics of Fordhook—its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant. Burpee's Best will climb ten to twelve feet under average conditions, and produce pods along its entire length in clusters of 4 to 8. The pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch thick. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest it to those who have been growing this older variety. **Pkt. 15¢; ½ lb. 40¢; lb. 60¢; 2 lbs. $1.00; 5 lbs. $1.90; 10 lbs. or more @ 35¢ per lb.**

90 days. The largest podded of all Pole Lima Beans. Pods measure from 7 to 8 in. in length and from 1½ to nearly 2 in. in width, and are produced freely in clusters of from 4 to 8 until the vines are killed by frost. Pole Lima Bean, Burpee's Best

95 Burpee's Sunnybrook ⊙

84 days. The popularity of this fine Pole Lima Bean is due to its extreme earliness and tremendous yield, each spike carrying from 5 to 10 pods of large size. The pods are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 to 8 in. long and 1¼ in. wide. Beans remain green for a long time, and as they are rather loose in the pod, they are easy to shell.

Each pod contains 3 and occasionally 4 beans, which are small, flat, white, with about ⅓ of the surface marked deep purple shading into a speckling where the two colors meet. BUSH LIMA BEANS

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover 2 in. deep with fine soil. Later thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush, Wood's Prolific, and Jackson Wonder. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. 100 ft.; 60 lbs. to an acre.

65 Burpee's Fordhook Bush Lima ⊙

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook Bush Lima Bean is known and grown wherever Beans are planted. It is a Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself, and is altogether unique. Nothing like it has ever been grown. It is a bush type of the popular "Potato" Lima; strong and erect and never prostrate or running. The stalks that produce the blossoms are thrown out from the lateral and main stalks, and the pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to 5½ in. long, 1¼ in. wide, and as much as ¾ in. thick. Each pod holds 4 or 5 large, plump Beans. The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. The foliage is of heavy texture and very dark green in color. On our own Seed Farms we grow enormous quantities of this Bean which we ship to our customers in every state in the Union. Sales are heavier each year due to the ever-increasing popularity of this Bean among home gardeners and market growers. For a Pole Lima of the Fordhook type, plant Burpee's Best.

64 McCrea Bush Lima

75 days. Miniature Fordhook, which is just what we have been waiting for To give an idea of the size of the beans themselves—the Fordhooks listed on this page are so large that 22 seeds will weigh one ounce. The McCrea is so small that it takes 70 seeds to weigh one ounce. While the seed itself is small, the plant is nearly as large as the original Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved and contain from 3 to 5 plump green beans of true Potato type. Although the pods are small, the unusually delicious flavor of this Miniature Lima has already made it a popular favorite with home gardeners and canners.

63 Burpee's Improved Bush Lima⊙

Another World Famous Burpee Introduction

75 days. The best of the flat-seeded Bush Limas, and a decided improvement over Burpee's Bush. The seeds and pods are larger, and the plants are more productive. The Beans are considerably thicker and retain their fresh green color for a longer time. Plants of Burpee's Improved are large and vigorous, meeting in a three foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 4½ to 5½ in. long, and 1 to 1⅛ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality. Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. $1.40; 10 lbs. or more @ 26¢ per lb.**

The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. TABLE BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best Beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row, one oz. for 100 ft.; 4 to 6 lbs. for an acre.

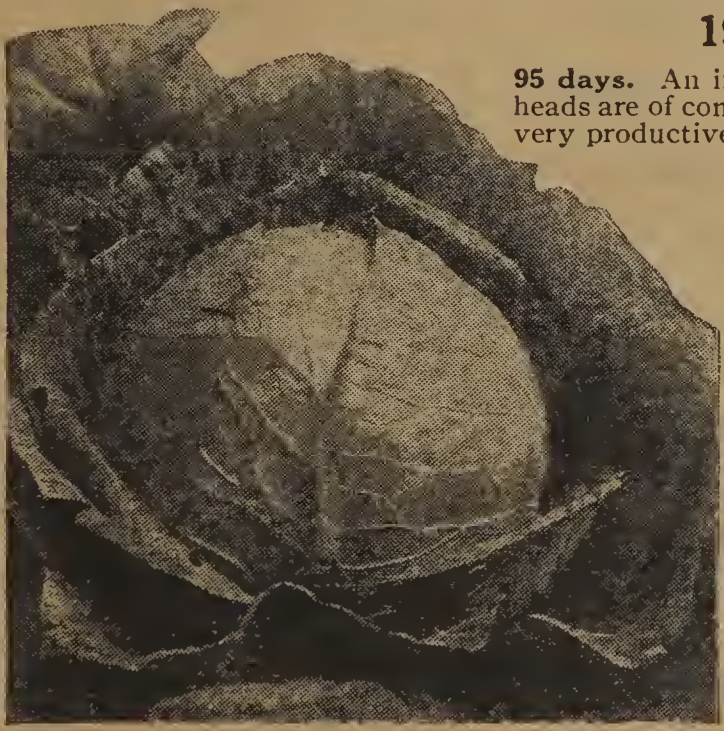
YELLOWS-RESISTANT CABBAGE

"Yellows-resistant" strains were introduced by the Wisconsin Agricultural Experimental Station so that Cabbages could be grown in localities where infested "Cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following varieties.



Marion Market (Yellows-Resistant)

170 Marion Market ⊙

105 days. Resembles Copenhagen Market but matures about 5 days later and makes a much larger plant. The heads are almost round and very solid, weighing 5 to 6 lbs. each. Favorite early variety for "yellows" infested land. **Pkt. 10¢; oz. 40¢; 4 ozs. $1.15; ½ lb. $1.90; lb. $3.50.**

191 Early Jersey Wakefield ⊙

Burpee's Surehead

195 Burpee's Surehead ⊙

Put in a planting of Cornell and try some Perfection Drumhead Savoy for late fall and winter use.
Pkt. 15¢; ½ oz. 55¢; oz. $1.00; 4 ozs. $3.00.

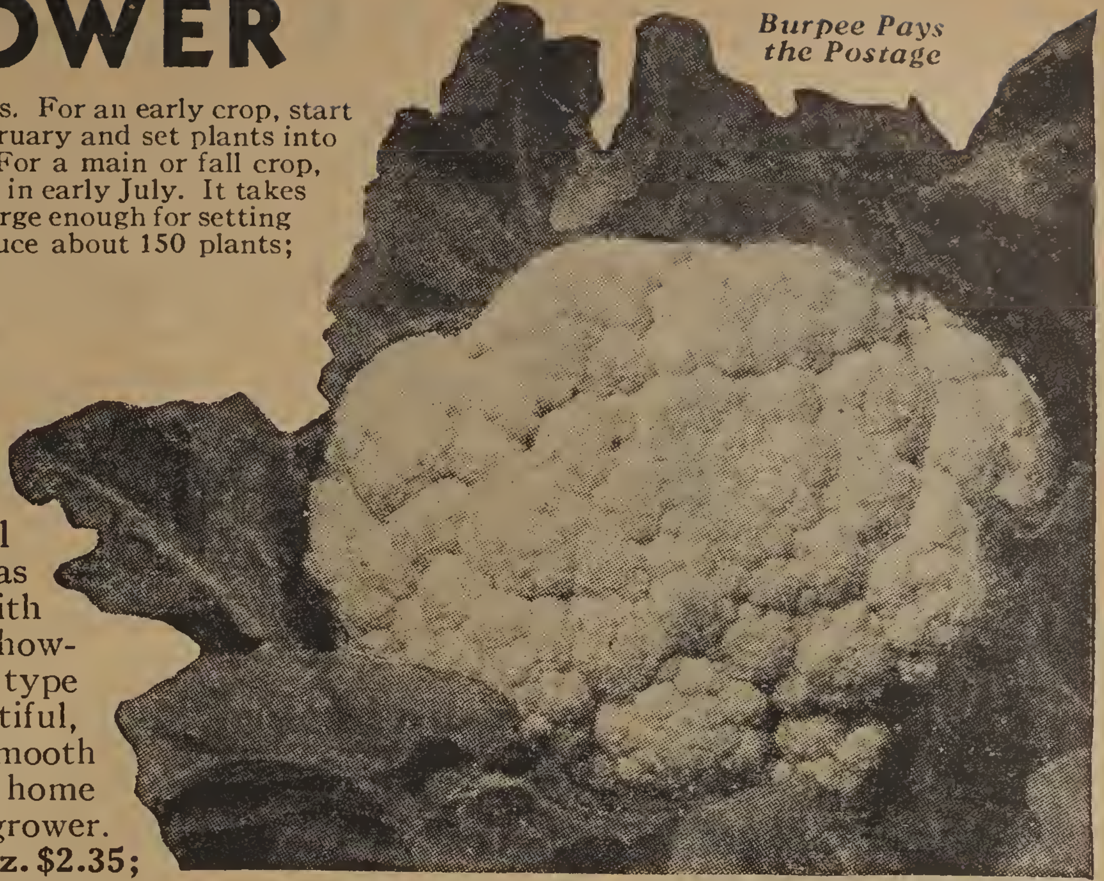
CAULIFLOWER

Burpee Pays the Postage

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One pkt. of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. for one acre.

253 Burpeeana ⊙

82 days. This is Super Snowball as offered by Burpee. It stands out as the most valuable Cauliflower. In tests of the Pennsylvania State College it appeared as the best of all strains, maturing just as early as Burpee's Fordhook. Dependable, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Beautiful, round, pure white heads with smooth curds. A prize Cauliflower for the home gardener as well as the market grower. **Pkt. 25¢; ¼ oz. 80¢; ½ oz. $1.35; oz. $2.35; 4 ozs. $7.80; ½ lb. $14.50; lb. $28.00.**



Burpeeana—the Super Snowball Cauliflower

246 Burpee's Fordhook

81 days. The earliest of all Cauliflowers we have ever grown: Will produce good-sized heads even under unfavorable conditions when most other varieties fail to give a satisfactory crop. Plants are dwarf and compact, yet the heads measure fully 6 in. in diameter. They are well-rounded and have a fine, closely formed, pure white curd. **Pkt. 15¢; ¼ oz. 65¢; ½ oz. $1.15; oz. $2.00; 4 ozs. $6.65; ½ lb. $12.35; lb. $24.00.**

244 Burpee's Best Early

85 days. Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. Grown in good soil, the snow-white heads of extra-fine quality measure 8 to 10 in. across, and mature extra early. It is an excellent market and home garden variety and should be sown so that the heads will mature during either early summer or late fall. Can always be depended upon to produce a heavy crop. **Pkt. 15¢; ¼ oz. 65¢; ½ oz. $1.15; oz. $2.00; 4 ozs. $6.65; ½ lb. $12.35; lb. $24.00.**

245 Burpee's Dry Weather ⊙

95 days. Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a Cauliflower of the highest quality, producing large, pure white heads ten days later than Burpee's Best Early. The heads are considerably larger than those of that famous variety, and are surrounded by more foliage. Individual heads weigh 2 lbs. each. **Pkt. 15¢; ¼ oz. 60¢; ½ oz. $1.10; oz. $1.75; 4 ozs. $5.85; ½ lb. $10.90; lb. $21.00.**

255 Burpee's Ideal Snowball ⊙

90 days. We claim this new Cauliflower is well named, as it is ideal in every way. Perhaps its outstanding merit is the large leaves which completely enfold the head and keep it pure white at all times. About 5 days later than Early Snowball. Plants are dwarf and compact; heads large, solid and snow white. Grown everywhere. **Pkt. 20¢; ¼ oz. 75¢; ½ oz. $1.30; oz. $2.25; 4 ozs. $7.50; ½ lb. $13.95; lb. $27.00.**

CHINESE OR CELERY CABBAGE

Not a true Cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary Cabbage. Where summers are cool, seed may be sown in spring, but in the vicinity of Philadelphia, seeds sown early in August have proved to give the best results. Makes full-size heads in 70 to 80 days after sowing.

The firm, well-blanched, white heads taper near the top. Leaves are broad, smooth and fringed at the edges. For market and roadside sales, Chihli is extensively grown, for the large, attractive heads sell readily; it is the most popular for the home garden. **Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. $1.15; lb. $2.00; 2 lbs. $3.70.**

CARROTS

Sow seed thinly in shallow-drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest Carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow about the middle of June, which will make full size roots before cold weather sets in. 1 pkt. of seed will sow 50 ft. of row; 1 oz. 200 ft.; 3 lbs. for one acre.

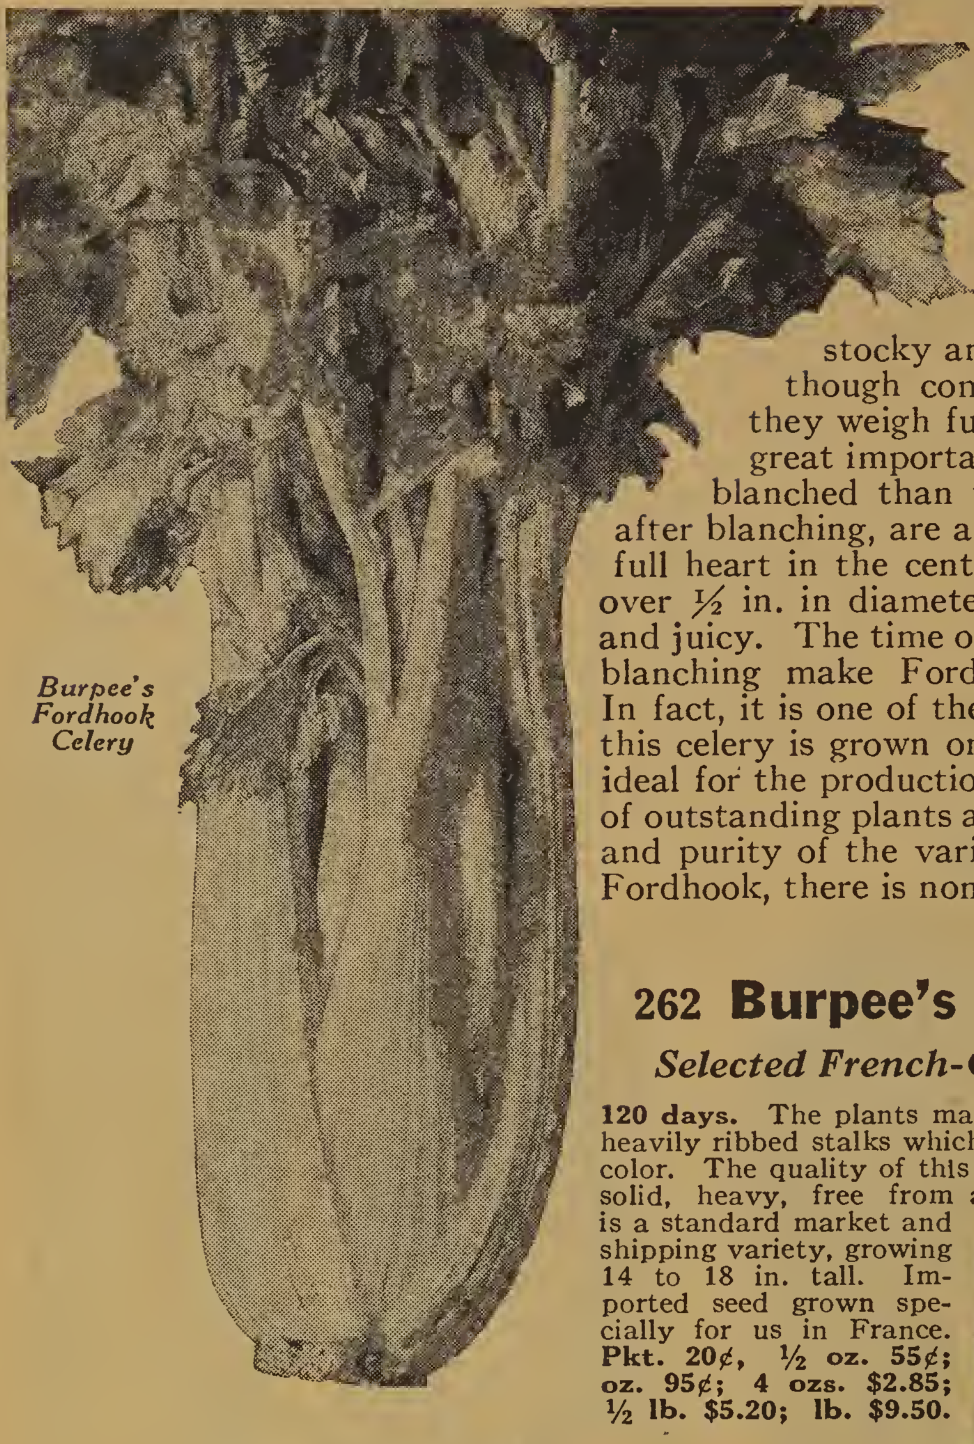
Sow Burpee's Guaranteed Seeds

CELERY

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or Celery paper may be used to blanch the stalks. One pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; 4 ozs. for one acre.



Burpee's Fordhook Celery

272 Burpee's Fordhook ⊙

The Finest Flavored Celery

130 days. Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a tender full heart in the center. They are extremely thick, measuring over ½ in. in diameter. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. In fact, it is one of the best keepers of all. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of the variety. If you grow Celery, you should try Fordhook, there is none better. **Pkt. 25¢; ½ oz. 35¢; oz. 60¢; 4 ozs. $1.85; ½ lb. $3.45; lb. $6.25.**

280 Florida Golden

118 days. A newer variety that has some of the good qualities of both Golden Plume and Golden Self-Blanching. We do not know of any type of Celery that has been more of a favorite than Florida Golden. It has the long first joint and long full heart so much desired, and stands cold weather well without developing soft stalks. The heart is a light golden color.

266 White Plume

112 days. The earliest and the most easily blanched Celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. The extreme earliness of this Celery, along with the ease with which it is blanched, has made White Plume a leading variety for fall and early winter use. Not suitable for winter storage.
Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. $1.40; lb. $2.50.

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Of course, the time is average and some variation is to be expected, depending on the season and locality.

268 Golden Plume Celery ⊙

115 days. Also called **Wonderful,** a name that is most appropriate for this splendid early Celery. Some gardeners consider it the best early Celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a thick, full, creamy heart; stalks blanch readily. Fine for home and market garden and is of excellent table quality. **Pkt. 10¢; ½ oz. 30¢; oz. 55¢; 4 ozs. $1.65; ½ lb. $3.00; lb. $5.50.**

270 French Special Golden Plume ⊙

110 days. An unusually thick-set, compact Celery, 10 days earlier than Golden Self-Blanching; has no soft stalks, and is free from strings. The rib is 9 to 10 in. to the first joint. Being solid and firm, it is less liable to damage by heat or cold. Plants are medium size and stocky. The full-hearted, thick, solid stalks bleach readily and are of the finest table quality. A most desirable Celery for market. **Pkt. 25¢; ½ oz. 60¢; oz. $1.10; 4 ozs. $3.30; ½ lb. $6.05; lb. $11.00.**

They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra-fine flavor. Hardier than Golden Self-Blanching. **Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.15; ½ lb. $1.90; lb. $3.50.**

282 Giant Pascal ⊙

135 days. Considered by many the standard winter Celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months. **Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. $1.40; lb. $2.50.**

CELERIAC

Celeriac grows best in a moderately moist yet well-drained soil which is fairly rich in barnyard manure. Frequent cultivation is necessary and occasional waterings are desirable. Start the seed in boxes indoors, and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderate size. Does not require blanching. The flavor of Celeriac is similar to that of Celery. Highly appreciated in European countries and becoming most popular in the United States; more so when it becomes better known. **Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 85¢; ½ lb. $1.25; lb. $2.25.**

SWEET CORN

Plant the seed after all danger of frost has passed in rows 2½ to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make succession sowings every 10 to 14 days until July 10—Sweet Corn maturing in the cool fall weather is excellent. Corn should be planted in blocks rather than in a single long row since pollination and the development of a full set of kernels is then insured. One pkt. of seed will plant 100 ft. of row; 1 lb. 350 ft.; 12½ lbs. for one acre.

CUCUMBERS

Make your first sowing of Cucumbers after all danger of frost has passed, to supply fruits for summer use, and a second sowing in late June or early July to furnish Cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10 seeds in each hill, and cover with ½ in. of soil. When plants are 6 to 8 in. tall, thin to 3 or 4 plants to a hill. One pkt. of seed will plant 15 hills; 1 oz. 50 hills; 2 lbs. for one acre. If seed is drilled, one acre requires about 4 lbs. of seed. Control cucumber insects with Red Arrow Garden Spray.

It is a vigorous, healthy variety, forming plants of medium size with bright green foliage. The buttery heart is a beautiful creamy white. Heads well under adverse conditions, such as drought and hot weather, which likely explains a portion of its popularity. Selections are being made in our test plots each year in order that our seed stocks may be produced from heat-resistant plants. **Pkt. 10¢; oz. 20¢; 4 ozs. 55¢; ½ lb. 80¢; lb. $1.40; 2 lbs. $2.55; 5 lbs. $6.15.**

530 Burpee's Iceberg ⊙

82 days. Curled, crisp plants of medium size, producing attractive green, wavy, fringed leaves having edges that are tinged with light brown. The heads are compact, not too large, and have few outer leaves and most delicious, crisp, tender hearts blanched to a silvery white even under average garden conditions. Iceberg is exceedingly vigorous and hardy, so that it will withstand quite hot weather; it is well suited to Eastern and Mid-Western growing conditions for this reason. This is the original Iceberg Lettuce introduced by Burpee in 1894. It should not be confused with New York Improved, which is grown in certain Western sections under the name "Iceberg."

Pkt. 10¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 80¢; lb. $1.35; 2 lbs. $2.50; 5 lbs. $5.95.

Follow the Bull's Eye

We have used this mark ⊙ for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark ⊙, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we recommend that you make your selection primarily from those marked with the bull's eye.

LOOSEHEAD OR CUTTING LETTUCE

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad, for when just a few inches tall, the thinnings may be used for the table. They are fine also for growing in the greenhouse during winter.

WATERMELONS

Rich, rather sandy soils produce the finest crops of Watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart.

Place 6 to 8 seeds in a circle in each hill, and cover ½ in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 12 hills; 1 oz. 25 hills; 3 to 4 lbs. for one acre. In northern states, plant Burpee's Fordhook, Cole's, or Early Northern Sweet.

611 Burpee's Halbert Honey ⊙

87 days. Burpee's Halbert Honey is "the sweetest of all" Watermelons. It is of handsome appearance and regular in form. The fruits are large, measuring 18 to 20 in. in length and 12 in. in diameter. The color of the skin is a beautiful deep green showing fine veins. The fruits weigh about 30 lbs. each and are, therefore, both large and heavy. The flesh is an appetizing rich crimson color, extending within less than ½ in. of the rind. Of luscious, sweet flavor, splendid for home use and nearby markets, but too thin skinned to stand long-distance shipping. For quality and sweetness, Halbert Honey is unexcelled. In the north or south it is a very popular variety for home gardens and for local or nearby markets. Introduced by Burpee in 1902. **Pkt. 10¢; oz. 15¢; 4 ozs. 35¢; ½ lb. 55¢; lb. 90¢; 2 lbs. $1.60; 5 lbs. $3.80.**

ONIONS

The soil best suited to grow a good crop of Onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked; space rows 1 to 1½ ft. apart. Cover the seed lightly, and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the Onions are harvested. One pkt. of seed will sow about 50 ft. of row; 1 oz. 200 ft.; 4 to 5 lbs. one acre. Japanese Bunching and White Welsh, which are used as green onions or scallions, are best planted in July for harvest the following spring.

Jumbo Virginia Peanuts

PEANUTS

For best results select warm, light or sandy soil rich in lime. Plant in rows 2½ to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the rows, or if planted in the hulls, place them 16 to 18 in. apart in the row. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row, one lb. from 100 to 200 ft. Use 35 or 40 lbs. of seed per acre according to method used in planting.

Peanuts are grown principally for their seeds, which are used as human food. Top growth may be used for hay.

GARDEN PEAS

Every home garden can easily produce enough Peas to supply the table for many weeks. For a continuous supply of this delicious vegetable, sow the hardier, smooth-seeded Peas as early in the spring as the ground can be prepared. Follow them with the wrinkled-seeded sorts when all danger of frost has passed. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Peas prefer cool, moist, loamy soil. Cover the seed 1 to 2 in. deep. Provide supports for the tall-growing varieties. One pkt. of seed will sow 20 ft. of row; 1 lb. 100 ft.; 120 lbs. 1 acre.

SMOOTH-SEEDED EARLY PEAS

RADISHES

If your garden includes some of each of the three different classes of Radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering ½ in. deep. Thin plants to stand 1 to 1½ in. apart in the row. Make succession plantings every week until early summer, then resume one month before frost. This applies to **spring** and **summer** radishes; seed of **winter radishes** is not sown until June. One pkt. will sow about 20 ft. of row; 1 oz. 100 ft.; 10 to 12 lbs. for one acre.

Plantings made in September will survive through the winter as far north as Pennsylvania and will give cuttings two weeks earlier than spring sown crops. One pkt. will sow about 25 ft. of row; 1 oz. 100 ft.; 10 to 12 lbs. one acre in rows; 20 lbs. one acre broadcast.

Sunnybrook Earliana

1097 Burpee's Sunnybrook Earliana ⊙

98 days. This is our own strain of Earliana which has been developed by crossing and selecting. Earliness, smoothness of fruit and compactness of vine growth have all been stressed in an effort to produce a Tomato that is really superior. Sunnybrook Earliana produces edible fruits several days earlier than other strains of Earliana, which is a decided advantage to those who grow for the early market. The compact habit of the plants permits of closer spacing in the field and a corresponding increase in yield. Plants of this type also give better protection to the fruits and prevent sunscald to a marked degree. Fruits are of medium size, scarlet red, solid, fleshy, and with a tart but agreeable flavor. **Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.20; ½ lb. $2.20; lb. $4.00.**

Orange Supreme

Burpee's New Giant Peony-Flowered Marigold

2300 **Orange Supreme** This is a last minute novelty and does not appear anywhere else in this catalog. It was developed on Burpee's Floradale Seed Farms and it is exclusively Burpee's. Giant Orange Supreme Marigold is of such sterling quality that we think it deserves the prominence given it on this page.

Flowers are very large, 4 to 5 in. across, perfectly double, with an attractive loose petal formation. Edges of petals are nicely frilled and those in the center fold upward and inward, giving the flower the appearance of a Peony. The intense orange flowers are borne on long, stiff stems, making them most desirable for cutting.

Plants are much branched, upright growing, strong and sturdy, 2½ to 3 ft. tall and extremely uniform. Begin blooming in about 17 weeks from seed; continue to flower profusely until frost. The vigor and stamina of the plants are truly remarkable. Beds or borders of Orange Supreme will produce a wonderful display; for cutting we do not know of any other flower that will attract more attention.

25 seeds 10¢; 75 seeds 25¢; 350 seeds $1.00; 1200 seeds $3.00.
